Sarang **Srivastava**

Backend & Platform Engineering | Applied AI

+91 9560105884 | sarangs722@gmail.com

EDUCATION

ABES ENGINEERING COLLEGE

B.Tech (Honours), Information Technology
2019 – 2023
CGPA: 8.7/10.0

PROFILES

github.com/sarangs722

linkedin.com/in/sarangs722

CODING PROFILES

LeetCode

GeeksforGeeks

HackerRank

SKILLS

Programming Languages: Python, Java, Go, SQL, Bash

Cloud & DevOps: Kubernetes, Docker, AWS (EKS), CI/CD, GitOps, Argo Workflows, HashiCorp Vault

Backend & Architecture: REST APIs, Authentication & Authorization, Microservices, Distributed Systems

LLM & Agents: LLM Applications, AI Agents, LangGraph, Tool/Function Calling, Agent Memory & State Management

RAG & Retrieval: Retrieval-Augmented Generation (RAG), Embeddings, Vector Databases

Protocols & Evaluation: Model Context Protocol (MCP), LLM Evaluation, Observability

Developer Tools: Claude Code, OpenAI Codex

CERTIFICATIONS

Anthropic
Claude Code in Action

Introduction to Model Context Protocol (MCP)

Building with the Claude API

Cisco Networking Academy
CCNA: Introduction to Networks

WORK EXPERIENCE

TATA CONSULTANCY SERVICES

Systems Engineer
Backend & Platform Engineering — Nov 2023 – Present

- Designed and deployed an **MCP server** exposing **60+ CI/CD and infrastructure operations** to a hosted LLM agent, enabling RAG-assisted builds and deployments through web and Slack.
- Built a **Python/LangGraph SRE agent** that maps services, infrastructure, and ownership into a validated knowledge graph; deployed it as a **FastAPI service on Kubernetes**.
- Built a reusable **CI and AI code-review toolkit for Java microservices**, combining changed-line coverage, static analysis, and multi-agent Claude Code review with findings verification, automated fixes, and prompt-injection safeguards.
- Led the migration of an enterprise secrets management platform to **OpenID Connect (OIDC)**, updating authentication workflows and **HashiCorp Vault** integrations for **150+ applications** handling **5M+ authentication requests per month**.
- Migrated **Argo Workflows** deployment automation from shell scripts to **Python**, improving maintainability and reliability of AWS and Kubernetes workflows supporting **3,000+ engineering teams**.
- Built a **self-service CI/CD platform** that generated pipeline configurations, enabling independent pipeline onboarding.

PROJECTS

Intelligent Document Retrieval Platform

Python, FastAPI, PostgreSQL, vector search, LLM APIs, React.js, Docker

- Built a **Retrieval-Augmented Generation (RAG)** application for multi-document search with citations, conversation memory, authentication, persistent chat history, and streaming responses.
- Implemented document ingestion from PDF parsing and chunking through embedding generation and semantic indexing.

QR Code & Facial Recognition Attendance System

Kotlin, Android, Node.js, Express.js, MongoDB, FaceNet

- Built an Android attendance app with rotating QR codes and a **Node.js/Express.js backend** to record attendance requests.
- Integrated **FaceNet-based facial recognition** and QR codes refreshed every **10 seconds** to help deter attendance fraud.

ACHIEVEMENTS

- **Star of the Month**, TCS, for contributions to engineering initiatives.
- Solved **900+ DSA problems** across LeetCode and GeeksforGeeks.
- **Global Rank 1654**, TCS CodeVita Season 10.
